State Engineer.

Compared with 1920

This permit is issued subject to all prior rights on the source. The amount of water herein granted is placed at the full statutory allowance of 0.4 cubic feet per second for the full acreage applied for, notwithstanding the fact that this land has already been granted a water right under permit No. 5764 from the same source. In this manner the full statutory amount of water may be diverted at the point of diversion set forth in this permit when it is not desired to divert any water whatsoever at the point of diversion described in permit No. 5764. However, the total amount of water which can be diverted from both points shall not exceed the statutory allowance of 0.4 cubic foot of water per second for the 40 acres proposed to be irrigated under the permits. The applicant will be required, at the time of filing proof of beneficial use of water, to definitely segregate the areas of land which obtain water from each of the points of diversion described in the two permits. A substantial headgate and weir must be installed at or near each of the points of diversion to facilitate the measurement and control of water. The State reserves the right to regulate the use of the water herein granted at any and all times. It is distinctly understood that the applicant agrees to the terms herein contained.
